

PRESS RELEASE

Enso Detego appoints new CEO

Graz, Austria, January 12, 2015 - [Enso Detego GmbH](#), a leader in RFID software products and solutions for the fashion industry, announced today that it has appointed Uwe Hennig as its new CEO.

Hennig takes office as the new CEO effective today. He joins from supply chain specialist [Zetes Industries SA](#), where he successfully grew the German business unit to its current revenue of €25 million.

After a successful repositioning of Enso Detego over the last 30 months, the company's previous CEO, Ewald Braith, has decided to step down to focus his attention on his current directorships and new engagements with Enso Ventures.

During his leadership, Braith refocused the company to become a leading provider of RFID software solutions for fashion retailers in Europe.

Nikolay Danilov, Chairman of Detego and founder of Enso Ventures commented: "Mr Braith has rejuvenated and refocused our business during his time in charge. We are looking forward to continuing to work with him, and to welcoming him to the board of our portfolio company Cambridge Nanotherm Limited."

Hennig has previously also held senior positions at Getac Technology, Intermec Technologies, and Apriso. He has 20 years experience in driving efficiency in supply chain management, and strong expertise in relevant technologies.

###

About Enso Detego:

Enso Detego GmbH is a leading provider of auto-ID and RFID software products and solutions to the fashion industry. The company offers solutions enabling customers to improve their efficiency and security within their supply chain, logistics and item-tracking operations. Enso Detego's market-proven software modules support standardized business processes in production, distribution and retail. Flexible, hardware-independent and scalable modules allow a rapid and effective implementation of RFID projects. The company offers RFID solutions that address operational efficiency and incremental business opportunities. Its RFID specialists offer clients a complete range of professional services including customized technology consulting, project implementation, sourcing of customer-specific RFID tags and infrastructure hardware, personnel training and after sales support.
